

GET THE LEAD OUT!

with Non-Metallic Faucet Options From Phoenix

When properly designed and manufactured, a plastic faucet will perform as long and as well as its traditional brass counterpart. In fact, in some harsh water environments plastic faucets, pipes and fittings will outlast traditional brass and copper equivalents. And it goes without saying that non-metallic faucets have no lead or other metals that can leach into drinking water.

Phoenix offers an extensive selection of 2-handle faucets for kitchen and bath that meet all current and pending drinking water laws and regulations. Below are examples of these designs. Our full product assortment can be viewed elsewhere on our site.

The Phoenix® family of 2-handle plastic underbody faucets are **American made** in our factory in Avon Lake, OH

shown: White finish with diverter for connecting a hand held shower, Brushed Nickel finish with teacup handles

shown: Chrome finish standard kitchen faucet, Brushed Nickel finish with teacup handles and high-arc spout

Catalina™ 2-handle plastic underbody faucets are manufactured by our foreign supply partners and are tested to ensure they meet the same Phoenix quality standards as our American made line.

shown: Chrome finish with diverter for connecting a hand held shower, Brushed Nickel finish with teacup handles, Rubbed Bronze finish with teacup handles and low arc spout

shown: Biscuit finish standard kitchen faucet, Chrome finish with teacup handles and hi-arc spout
